Professional Summary

Software Engineer with over 3 years of production experience designing, optimizing, and scaling high-throughput Java backend ecosystems, distributed networks, and event-driven microservices. Proven expertise in maximizing core system reliability, mitigating race conditions, and reducing processing latency inside critical transactional platforms handling up to 27.7M active users. Competent executing zero-downtime structural framework modernizations, optimizing cloud architectures, and integrating contextual Generative AI orchestration blocks securely into scalable enterprise configurations.

Core Competencies

- **Backend Architecture & Patterns:** Microservices, Monolith Refactoring, Object-Oriented Design (OOD), SOLID Principles, System Design, Distributed Transactions, Concurrency, Multithreading, Enterprise Design Patterns.
- **Data Infrastructure & Caching:** High-Throughput Event Streaming, Distributed Caching, Rate Limiting Patterns, Relational Database Isolation Levels, Tuning, Indexing Strategies, Transaction Integrity Management.
- **Testing & CI/CD Systems:** Test-Driven Development (TDD), Unit Testing Isolation, Mock Verification, End-to-End Build Automation, Code Quality Inspections, Containerized Deployments, Infrastructure Consistency.

Professional Experience

Paytm (One97 Communications)

Software Engineer

Noida, India

Sep 2025 – Present

- **Workflow Optimization:** Managed and optimized high-volume telecom CRBT/PRBT billing architectures serving **27.7M active users**, streamlining subscription status lifecycles and mitigating system state failures.
- **Latency Reduction:** Reduced peak traffic end-to-end API latency by **35%** by designing distributed processing data pipelines leveraging Apache Kafka message clusters and Redis distributed caching to bypass relational database row locks.
- **Revenue Stabilization:** Enabled features driving a **22% platform revenue expansion** by programming thread-safe, concurrent transaction validation loops using Core Java Collections and custom validation hooks across USSD, WAP, and Web interfaces.
- **Core Modernization:** Contributed to a zero-downtime core legacy monolith migration from Java 1.6 to Java 21, resolving complex broken dependency graphs and successfully verifying execution stability on Apache Tomcat 11.
- **Perimeter Security:** Hardened system access points by configuring Spring Security custom filter chains, multi-tiered JWT authentication validation steps, and localized distributed token-bucket rate limiters.
- **AI Engineering Tooling:** Accelerated internal engineering feature delivery velocity by **40%** via the architectural integration of LLM endpoints (Claude, OpenAI) utilizing targeted prompt engineering, structured JSON context definitions, and API orchestration to automate code generation pipelines.
- **UI Alignment:** Guarded monolithic user journeys against rendering regressions by refactoring presentation fragments inside legacy Apache Struts views and modern Spring Thymeleaf web components.

Publicis Sapient

Associate Software Engineer – Openlink Endur

Gurugram, India

Apr 2022 – Jul 2024

- **System Reliability:** Secured **99.99% operational uptime** for multinational energy trading desks by managing L3 backend systems engineering, conducting deep-dive root-cause analysis, and automating transaction log error sweeps.
- **Automation Extensions:** Eliminated record parsing manual error rates by programming custom backend plugins and background automation workers using OpenJVS and OpenComponents (OC) framework libraries.
- **Database Refinement:** Ensured data layer isolation and transactional consistency across high-frequency deal-booking histories by writing optimized MySQL scripts, views, and complex relational schema joins.
- **Pipeline Management:** Maintained continuous build stability across shared master code lines by configuring validation checks, static code quality rulesets, and automated execution scripts within Azure DevOps and Jenkins CI/CD.

Production & Internal Projects

Vodacom Tanzania CRBT Platform (Rollout Phase)

Spring Boot 3.x, Apache Kafka, Redis, Distributed REST APIs, JSON

- Developed concurrent RESTful microservices managing multi-tenant cross-network authorization routines and verification loops, supporting a target footprint of 27.7M users while preserving JVM heap allocation limits.

Ncell Nepal PRBT Platform (Live Production)

Core Java, Spring Boot, MySQL, Telecom Provisioning Frameworks

- Implemented the core MSISDN payment module and background network verification triggers, optimizing data queries to absorb and sustain over 50,000+ active premium subscribers smoothly.

Trade Lifecycle Automation Engine (Internal Tooling)

Java, Openlink Endur Architecture, Core Java Libraries

- Built standalone Java components to automate structured data capture and execution logs for commodities delivery tracking, decreasing manual record-keeping error parameters.

Technical Skills

- **Languages:** Java (8, 11, 17, 21), Python, SQL (MySQL, PostgreSQL), Core Java Concurrency (Multithreading, JVM, Collections).
- **Backend Frameworks:** Spring Boot 3.x, Spring Cloud (Basics), Spring Security, Hibernate, Spring Data JPA, Apache Struts, Spring Thymeleaf.
- **Messaging & Distributed Data:** Apache Kafka, Redis (Caching, Distributed Locking, Rate Limiting).
- **Cloud & DevOps Tooling:** AWS (EC2, S3), Docker, Kubernetes (Basics), Jenkins, Azure DevOps, Git, Apache Tomcat, Linux Systems, Maven, CI/CD.
- **Testing & Architecture:** JUnit, Mockito, Swagger/OpenAPI, Object-Oriented Design (OOD), System Design, SOLID Principles, TDD.
- **AI Engineering Frameworks:** LLM Integration (OpenAI API, Anthropic Claude), Prompt Engineering, Context Window Optimization, basic RAG Architecture.

Key Achievements

- **Algorithmic Foundations:** Solved **100+** Data Structures and Algorithms tracking problems on LeetCode (leetcode.com/u/azimsh) evaluating space/time complexity and optimization methodologies.
- **Cloud Infrastructure:** Earned the **Microsoft Certified: Azure Fundamentals (AZ-900)** designation, verifying baseline cloud systems design proficiency.
- **Data Systems Mastery:** Awarded the **IBM Certified: SQL & Relational Databases Mastery Expert** designation for performance analysis and normalization execution.

Education

Al Falah University

B.Tech in Computer Science & Engineering

Faridabad, India

2017 – 2021
