Summary

Backend Engineer with 3+ years of experience specializing in high-throughput Java ecosystems, distributed systems architecture, and transactional backend scaling. Proven track record designing fault-tolerant billing engines and asynchronous microservices handling events for 27.7M active users. Expert at driving core enterprise framework migrations (Java 1.6 to Java 21) and integrating production-ready AI frameworks—including LLM APIs, Retrieval-Augmented Generation (RAG), and agentic workflows—to enhance distributed application ecosystems.

Technical Skills

Languages: Java (Expert: 8, 11, 17, 21), SQL

Backend Architecture: Spring Boot 3.x, Spring Security, Hibernate, Spring Data JPA, REST APIs, Microservices, Monolith Refactoring

Distributed Systems & Databases: Apache Kafka, Redis (Caching & Distributed Queues), MySQL 8

Infrastructure & DevOps: AWS (EC2), Linux Administration, Jenkins, Azure DevOps, Git, Apache Tomcat (9/10/11), CI/CD Pipelines

AI Engineering & Tools: LLM Integration, Agentic AI Workflows, RAG Architecture, Cursor, Claude, OpenAI API, Token Optimization

Monolithic Layouts (Working Knowledge): Spring Thymeleaf, Legacy Apache Struts UI, HTML, CSS, JavaScript

Professional Experience

Paytm (One97 Communications)

Sep 2025 – Present

Software Engineer

Noida, India

- Maintained and optimized critical telecom CRBT/PRBT billing modules, processing complex subscription lifecycles and transactions for a core application stack serving over 27.7M customers.
- Engineered distributed data processing pipelines using Apache Kafka event streaming and Redis caching, eliminating relational database locking issues and reducing end-to-end API latency during traffic peaks.
- Programmed concurrent, transaction-safe billing layers across USSD, WAP, and Web portals with automated hooks for OTP and direct charging rules, directly supporting features tied to a 22% platform revenue increase.
- Led technical codebase modernization of a massive legacy enterprise monolith from Java 1.6 to Java 21, resolving broken dependency graphs and deploying onto modern Apache Tomcat 11 environments with zero downtime.
- Hardened internal application entry-points by implementing strict request-filtering, JWT authentication mechanisms, and custom token-bucket token rate-limiters using Spring Security.
- Maintained and adapted server-side user layouts inside monolithic systems, managing legacy Apache Struts views and Spring Thymeleaf interfaces to prevent backend-to-frontend rendering regressions.
- Accelerated backend feature deployment velocity by creating deterministic prompt rulesets and token-optimized contextual parameters for localized LLM tooling (Cursor, Claude).

Publicis Sapient

Apr 2022 – Jul 2024

Associate Software Engineer – Openlink Endur

Gurugram, India

- Provided L3 backend systems engineering and incident management for high-availability Openlink Endur architectures, ensuring uninterrupted operational execution for global energy trading desks.
- Programmed robust custom backend plugins and background automation workers using OpenJVS and OpenComponents (OC) to safely parse multi-format transaction records.
- Authored optimized MySQL query logic, procedures, and data validation layers to guarantee transactional database consistency across core deal-booking logs.
- Managed automated trunk-line execution safety checks, code metric inspections, and build pipelines inside integrated Azure DevOps and Jenkins platforms.

Key Scaling Projects

- Ncell Nepal PRBT Platform** | *Java, Spring Boot, MySQL, Provisioning Frameworks* Live Production
- Designed and implemented the core Java-based MSISDN billing module and automated background network callback triggers, scaling system loops to absorb and sustain over 50,000+ active paid premium subscribers smoothly.
- Vodacom Tanzania CRBT Platform** | *Spring Boot 3.x, Apache Kafka, Redis, REST APIs* Rollout Phase
- Architected highly concurrent REST sub-services managing cross-network multi-tenant verification steps and OTP validation loops for a platform base of 27.7M users while preserving strict memory consumption limits.
- Enterprise Trade Lifecycle Automation Engine** | *Java, Openlink Endur, Core Libraries* Internal Tooling
- Developed standalone Java execution components extending native system models to automate structured transaction logging, mitigating manual input error margins inside commodity delivery tracking.

Technical Certifications

Microsoft Certified: Azure Fundamentals (AZ-900)
IBM Certified: SQL & Relational Databases Mastery Expert
Industry Endorsed: Advanced Spring Boot 3 & Hibernate Enterprise Architecture Blueprint

Education

Al Falah University <i>B.Tech in Computer Science & Engineering</i>	Faridabad, India 2017 - 2021
